HYPER ARMED HOUSING

BAITCASTING REELS

BAITCASTING REEL TECHNOLOGIES

1 CASTING CONTROL

SV BOOST

At the beginning of a cast (A) when the spool is at its peak speed, the rotor is kicked out into the magnetic brakes. This prevents backlash while also regulating line release.

Towards the end of your cast, as the lure starts to slow, the induct rotor kicks back one level (B), reducing the braking power and allowing for added distance at the end of a cast.

Just before the lure hits the water the induct rotor is released completely (C), giving you maximum distance.

SV Boost adds another new level to our existing SV braking, for more precise control.

MAGFORCE[®]-Z

The system uses a moveable inductor cup on one end of the spool. As the spool speeds up or slows, the inductor cup automatically moves in or out of a magnetic field to adjust braking power and prevent backlash. For even greater control, you can adjust the overall strength of the magnetic field.

MAGFORCE[®] MAGNETIC BACKLASH CONTROL

A spool braking system designed to slow the spool speed with magnetic force according to desired settings, in order to prevent overrun.

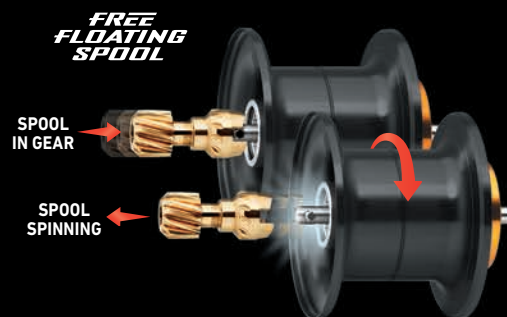

G1 DURALUMINUM SPOOL

An extremely rigid flex-resistant aluminum alloy. This metal alloy allows us to subtract much of the weight of the spool without sacrificing durability. This also creates less start-up inertia allowing the angler a longer and more manageable cast, especially with light lures.

FREE FLOATING SPOOL

Daiwa's unique system floats the spool independently on precision, stainless steel ball bearings. The pinion rides on its own separate shaft, allowing the spool to spin freely, unhampered by gear train friction when casting.

ZERO ADJUSTER

Once set properly, there is no need to make further adjustments, hence the name. This feature is designed to set the tension control very accurately and it stays in position firmly to allow full free-spool with almost no side-play in the spool optimizing your casting distance and performance.

T-WING SYSTEM (TWS)

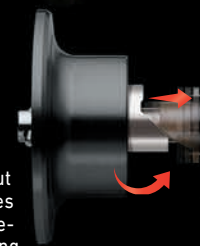

T-Wing's wider aperture means reduced angles and less line friction when casting from any position.

DAIWA'S EXCLUSIVE AIR BRAKE SYSTEM

Incorporating the combination of Magforce[®]-Z and an SV Spool, a rotating rotor is kicked out towards the magnetic brakes using the spool's inertia, creating buttery smooth braking pressure preventing overrun.

As the spool begins to slow nearing the end of the cast, the rotor cup automatically retracts from the magnet—keeping the spool spinning longer—maximizing casting distance.

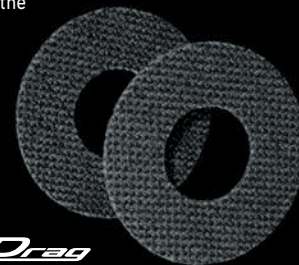

2 BRAKING

ULTIMATE TOURNAMENT DRAG (UTD)

Utilizes impregnated carbon drag discs with proprietary Daiwa DSG505 grease. The effective drag power is considerably increased compared to normal drag systems.

The advantage is the reduced start-up resistance of the drags providing a smooth and steady feel.

3 PROTECTION

MAGSEALED

MAGSEALED[®] BALL BEARING
Magnetic oil bridges the gap between the inner and outer bearing races—keeping the elements out.

CRBB SEALED BEARINGS
Corrosion resistant ball bearings last up to 12 times longer than standard stainless steel ball bearings.

4 MATERIALS

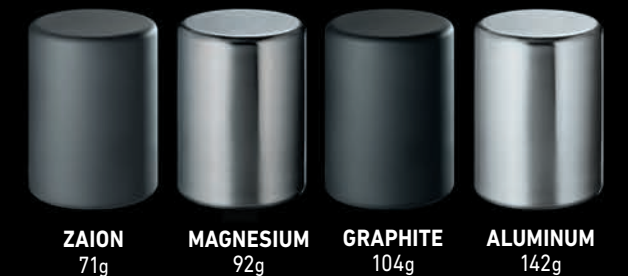

BAITCASTING FRAMES ARE AVAILABLE IN FOUR DIFFERENT MATERIALS

ZAION—Daiwa's exclusive high-density carbon material that's as strong as magnesium—yet even lighter. 25% lighter than magnesium and 50% lighter than aluminium. Highly corrosion-resistant.

MAGNESIUM—an incredibly light and strong alloy. One of the lightest reel construction materials available.

GRAPHITE—Is a form of molded and heated powders that creates a strong corrosion resistant plastic element. This allows for a light, ridged and cost effective material.

ALUMINIUM—a favorite of many anglers. Highly corrosion resistant and extremely durable. Excellent in fresh or saltwater environments.

Note: These weights are arbitrary to show the weight differences between the 4 alloys.

HYPERDRIVE[™] DESIGN

HYPER ARMED HOUSING

A metal frame and sideplate for maximum rigidity and precision performance of all internal components.

HYPER TOUGH CLUTCH

A redesigned and reinforced clutch mechanism increases durability, performance and confident feel to the angler.

HYPER DOUBLE SUPPORT

A two bearing support system for the reel's pinion gear means no side-to-side movement flex providing longer gear life and a more direct transfer of power for an ultra-smooth retrieve/ gear rotation.

HYPERDRIVE[™] DIGIGEAR

Newly engineered gear design makes the teeth of the gears more efficient at transferring power, therefore making the gear set feel smoother, more powerful and also reduces gear noise and wear.

* = Left Hand Retrieve CRBB = Corrosion Resistant Ball Bearing, BB = Stainless Steel Ball Bearing, RB = Roller Bearing

SHALLOW SPOOL
A low mass A7075 Aluminum spool allows for quicker startup inertia and maximizes braking efficiency.

100MM HANDLE
Easy grip EVA knobs for added torque and comfort.

90MM SWEEP HANDLE
Compact for added comfort and control.

ORDINARY TRAJECTORY.
When spool stops, lure splashes down.

ELITE P/F TRAJECTORY.
Extended casting distance is gained as the lure descends gradually and slides into the water more stealthily.

REDESIGNED SPOOL
Extremely lightweight, allowing for quicker startup and longer casts.

DAIWA LT SPINNING REELS

LT LIGHT TOUGH

LIGHT TOUGH (LT) FRAME

Daiwa's exclusive compact frame design allows for maximum weight reduction.

SMALLER, LIGHTER, TOUGHER FRAME.

MONOCOQUE

Our MONOCOQUE frame design is truly a game changer. Increased weather resistance and a larger drive gear are the perfect embodiment of Light and Tough.

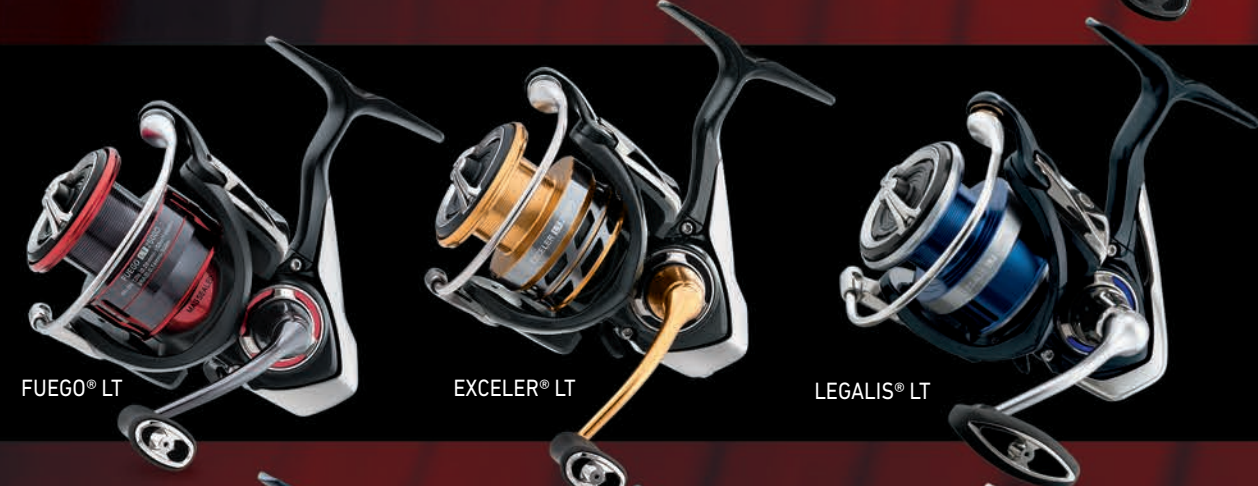

MQ

AIR ROTOR AND AIR BAIL

A uniquely designed AIR ROTOR and AIR BAIL allow for maximum strength, yet reduced overall weight.

AIRBAIL

LT CONCEPT

Featuring DIGIGEAR technology for the perfect combination of performance and value.

DIGIGEAR

ZAION

These two series feature our lightweight ZAION® Frame which is stronger than ordinary carbon materials.

DAIWA LT SPINNING REELS

SPINNING REEL INNOVATIONS

MONOCOQUE ONE PIECE FRAME

MQ

INCREASED TORQUE AND POWER

Unique 360° sideplate eliminates the need for screws on Monocoque reels. All MQ Frames Feature Machined Aluminum Screw-in Handle.

MONOCOQUE FRAMES ARE AVAILABLE IN FOUR DIFFERENT MATERIALS

ZAION—Daiwa's exclusive high-density carbon material that's as strong as magnesium—yet even lighter. 25% lighter than magnesium and 50% lighter than aluminum. Highly corrosion-resistant.

ZAION V—is a sub-category of our proprietary ZAION material. ZAION V is a carbon-based resin material with many of the same attributes as ZAION. It is as light as ZAION and as corrosion resistant, but easier to machine so we are able to utilize it in a wider range of our reels. This allows a wider range of price point to enjoy the benefits of ZAION materials, which are lighter and more corrosion resistant than standard graphite.

MAGNESIUM—an incredibly light and strong alloy. One of the lightest reel construction materials available.

ALUMINIUM—a favorite of many anglers. Highly corrosion resistant and extremely durable. Excellent in fresh or saltwater environments.

Note: These weights are arbitrary to show the weight difference between the alloys.

AIRDRIVE DESIGN

The combination of 4 ground breaking design technologies puts AIRDRIVE™ DESIGN reels in a class of their own.

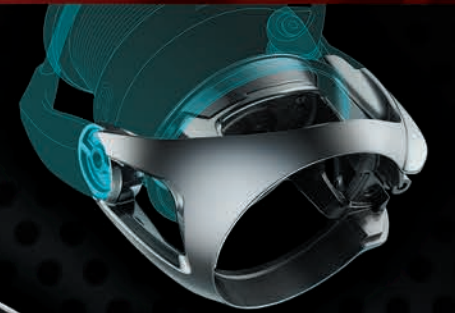

1 AIRDRIVE BAIL

A new design is constructed with a smaller diameter, reducing the weight of the front unit, while still providing the strength needed. In comparison to 18 EXIST, weight is reduced by 33% (compared to 2500 size). The angle of the bail has also been altered, improving line management by guiding the line through the line roller with ease.

2 AIRDRIVE SPOOL

A new spool skirt design further reduces weight for improved oscillation, less resistance during rotation and better overall balance of the reel.

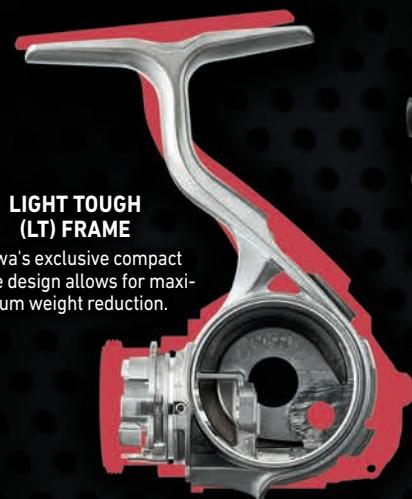

4 AIRDRIVE ROTOR

A newly developed ZAION rotor maintains the strength of previous designs, while significantly reducing weight. A 16% weight reduction from the 2018 EXIST allows for trouble free, flawless rotation.

3 AIRDRIVE SHAFT

A non contact structure between the mainshaft and the pinion gear allows for friction free rotation. In addition, both ends of the pinion gear are now supported with bearings to relay the crank power from the handle to the rotor with a higher level of efficiency. By adding high quality collars to the mainshaft, rotational noise has been reduced significantly for a smooth, quiet rotation that provides added torque and power.

LT LIGHT TOUGH

LIGHT TOUGH (LT) FRAME

Daiwa's exclusive compact frame design allows for maximum weight reduction.

AIR ROTOR

LIGHT WEIGHT AIR ROTOR®

Our exclusive design reduces weight by up to 15% compared to standard rotors, offering optimal winding and eliminating vibration.

ATD

ATD® DRAG

High density woven carbon impregnated with specially designed grease, creating a smooth and fluid high performance drag.

MAGSEALED

MAGSEALED® LINE ROLLER

MAGSEALED® technology in this key area of the reel reduces water and debris from gathering, improving line roller durability and smoothness for less line friction and twists.

MAGSEALED® BALL BEARING

We have now also pioneered a revolutionary means to adding our Magsealed technology to ball bearings to keep water, dirt and debris out of your reel. Magnetic oil bridges the gap between the inner and outer bearing races—keeping the elements out.

MAGSEALED® REELS

These reels utilize our patented technology to apply magnetic oil that can change density and shape when a magnetic field is added. When Magseal technology is applied to the main shaft and/or line roller of a spinning reel, it produces a low-friction seal that keeps water, dust and grit from encountering the internal components of the reel. The result is a watertight seal with much lower resistance than rubber type seals.

SALTIGA

SALTIGA SALTWATER SPINNING REELS

DIGIGEAR

12% BIGGER SALTIGA GEAR

ORIGINAL SALTIGA

SUPER-SIZED SALTIGA DIGIGEAR

Twice the strength and twice the power of previous Saltigas.

ATD

ADVANCED TOURNAMENT DRAG

We've added 9 more drag washers, with 75% more drag surface, spreading the workload evenly across the drag stack. 9 Carbon fiber washers plus 9 durable metal washers creates a smooth release. Additionally, we've secured the stack on top and bottom with stabilizing bearings—decreasing wear and increasing durability.

ORIGINAL SALTIGA DRAG

With 9 Drag washers

LEVER DRAG, 2-SPEED REEL

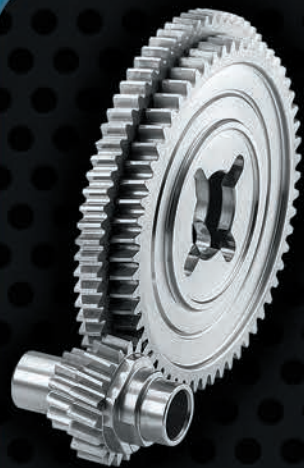

(See Pages 46-47)

2-SPEEDS
Power or speed at the push of a button.

SALTIGA

DIGIGEAR

BIG SIZE FOR BIG POWER
A new super-sized stainless steel DIGIGEAR is smoother winding and gives more torque than ever.

ATD

ATD DRAG
Advanced Tournament Drag (ATD) gives you maximum fish pulling power. Larger discs allow for a more consistent heat displacement, resulting in a more efficient drag system.

UP TO 45 LBS OF DRAG WHEN YOU NEED TO HAMMER DOWN
With a heavy duty drag capable of up to 45 lbs at full drag, you have the power needed to take down a wide range of tough predators.

MAGSEALED

CRBB

MAGSEALED® BALL BEARING
Magnetic oil bridges the gap between the inner and outer bearing races—keeping the elements out.

CRBB SEALED BEARINGS
Corrosion resistant ball bearings last up to 12 times longer than standard stainless steel ball bearings.

PERFECT FOR KITE FISHING ON THE TROLL

Trolling live or dead baits while using a kite can be extremely effective in attracting strikes from sailfish, tuna, dolphinfish and any other bluewater game fish prone to crashing a bait at the surface. When kite fishing while trolling, it is crucial to motor into the wind to keep the kite from stalling. For maximum surface coverage, many anglers position two kites out of the outriggers and then arrange a full spread of flat lines, as well.

PERFECT FOR KITE FISHING ADRIFT

Drifting is the most popular approach to kite fishing, punctuated by exciting surface strikes from aggressive game fish. Again, using two kites (weighted to fly to the left and right), with multiple baits off each kite line, helps to achieve maximum surface coverage. (In fact, flat lines used on the upwind side of the boat provide even more coverage.) Using a sea anchor(s) to slow the boat's drift can help the kite fly better.

BLX Bass rod matched with EXIGLT2500-XH reel (See page 32 for details).

FRESHWATER RODS

NEW TATULA XT Bass Rod matched with TTUCT100H reel (See page 19 for details).

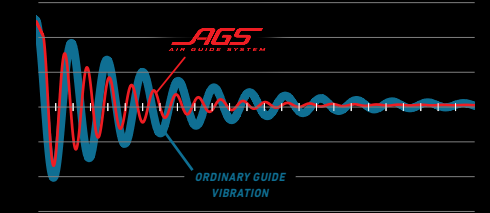

AGS AIR GUIDE SYSTEM

Daiwa AGS Guides are the lightest most sensitive guides in the industry.

AIR GUIDE SYSTEM (AGS)

Carbon framed guides create a more rigid and sensitive guide, at the same time substantially reducing overall weight.

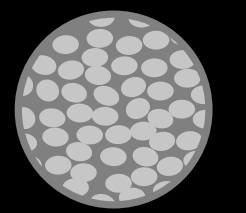

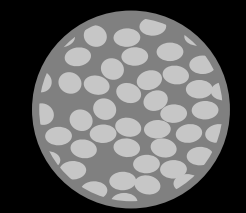

AGS QUICKLY DAMPENS VIBRATION

Carbon framed guides quickly reduce the vibrations from the bait/line compared to standard guides. This means a quicker response and feel to the angler for increased sensitivity to your bait. This allows you to feel structure better and detect even the slightest of bites.

X45

X45° BIAS CONSTRUCTION

45 Degree Bias Construction prevents twisting of the blank for greater strength, sensitivity and hook setting power.

HVF AND SVF BLANK TECHNOLOGY

HVF Technology has a higher volume of fiber and less resin- creating a lighter, stronger and more sensitive blank than standard blank constructions. **SVF** takes that technology one step further with an even higher volume of fibers, increasing sensitivity and strength and reducing weight even further.

TATULA® ELITE™ BASS RODS

PREMIUM QUALITY BASS RODS

» Daiwa's Exclusive SVF NANOPLUS™ Graphite (except some models) » X45® Bias Construction
 » Daiwa's Exclusive Air Guide System (AGS) on "AGS" Models » Daiwa's Exclusive Custom Reel Seats (Except Some Models) » GLATECH™ Construction ("G" models) » Limited 5 Year Warranty

A complete set of professional tools for every kind of bass fishing, built for the needs of the Pros who helped design them. They can handle any of today's advanced techniques, on any bodies of water, no matter what conditions. Their knowledge and years of experiences go into every Tatula Elite rod we make, so you have the perfect rod for any technique and any condition.

FUJI® HEAVY DUTY GUIDES

Heavy duty, corrosion resistant Fuji® saltwater grade components.

WINTHROP TACKLE TERMINATOR ADJUSTA-BUTT

The Winthrop Tackle Terminator Adjusta-Butt incorporates two butt handles in one. With just the push of a button, you have the flexibility to position your rod from straight to bent. Built from solid aircraft-grade aluminum with a hardened stainless steel positioning mechanism, this butt is precision-built for strength and lightness. The newly designed reel seat has an adjustable machined hood with small and large mouths and is created to accept reels from #30-130 Class. The Delrin Collet Nut is made to stay tight to the hood at all times.

DAIWA SURF & JETTY ROD FERRULE SPLIT OPTIONS

There are a variety of options how to manage the extended lengths of surf rods:

3-PIECE (33/33/33) SPLIT
Convenient option to store and travel with long rods.

2-PIECE (50/50) SPLIT is convenient to store and stow for travel.

2-PIECE (70/30) SPLIT is as similar to a one piece as you're going to get, while still being able to collapse down to store or stow for travel. With all of the guides on the 70% length tip portion, the bend is more evenly distributed.

TEAM DAIWA SURF® RODS

» Daiwa's Exclusive High-Modulus (HVF) Graphite » X45® for Zero Blank Twist » 2-Piece Models Feature 50/50 Split » Limited 5 Year Warranty

DAIWA® TOOLS & ACCESSORIES

BAIT SHAKER, ROD/REEL WRAPS, BRAID SCISSORS, PLIERS AND MORE

NEW DARKWATER BAIT SHAKER

When catching live bait, the Darkwater Baitshaker allows you to easily and safely shake your baits off into the tank without the need to grab them by hand. Also doubles as a pull gaff for getting fish out of your cooler or fish box.

EVA PROTECTIVE CAP
You don't want any mishaps out on the water, so we added a protective removable EVA tip cap.

NEW DARKWATER BAIT SHAKER
DKWTBTSHKR 19" MSRP \$19.99

DAIWA VEHICLE AND BOAT LOGO DECALS

Weeded & masked vinyl with backing sheet for placement.

Sturdy stainless steel construction for security and comfort.
Clips to fighting belt, regular belt or pants.

PLIER SHEATH
DPLR-SH MSRP \$8.99

DAIWA LUBRICANTS

Greaser won't thicken when cold or run when hot. Keeps gears running smooth and quietly. Oiler inhibits rust and saltwater corrosion. Fits easily in tackle trays.

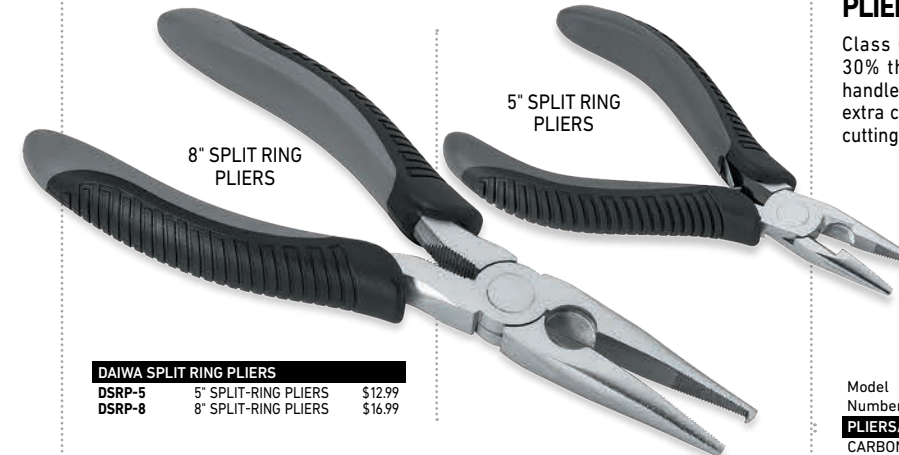

DAIWA REEL OILER
HANDY ONE-DROP LUBE, CONVENIENT POCKET CLIP, FITS EASILY IN TACKLE TRAYS
64110100 MSRP \$5.99

DAIWA REEL GREASER
HANDY ONE-DROP LUBE, CONVENIENT SQUEEZE BOTTLE
64110200 MSRP \$5.99

SPLIT RING PLIERS

Daiwa has designed two split-ring pliers to be a step above the rest. 5" is built to fit into small to micro split-rings that you find in both bass, trout and smaller lure.

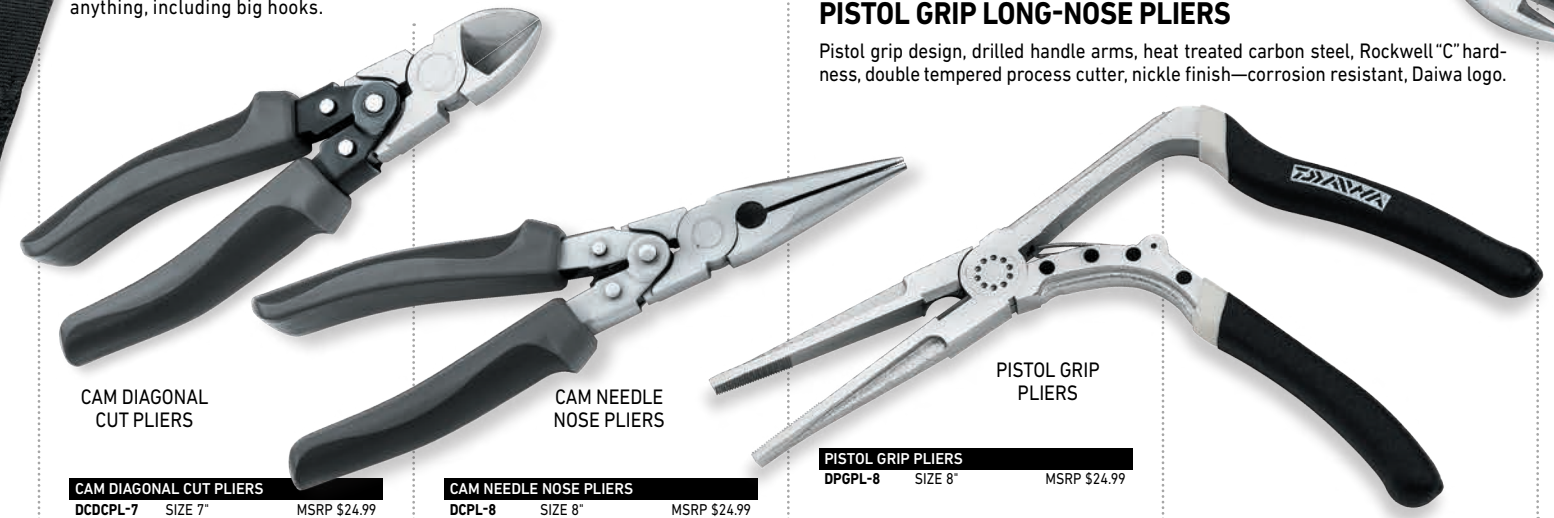

The 8" is designed for monstrous swimbaits, saltwater jigs, and muskie lures. Both Nickel plated and engineered out of steel "ROCKWELL C" hardness rating, these pliers are built to last and feel great with rubberD-VEC logo handles.

DAIWA SPLIT RING PLIERS
DSRP-5 5" SPLIT-RING PLIERS \$12.99
DSRP-8 8" SPLIT-RING PLIERS \$16.99

CAM PLIERS AND DYKES

CAM DYKES are 7", CAM NEEDLE NOSE are 8". Featuring 80% more leverage gripping and cutting power, cut hooks of almost any gage 10% harder than they would normally make this tool (Normal carbon steel tools are heat treated (with chromium and other stuff) and have about 54°-56° RC (Rockwell C) scale reading. These 2 new high compression Daiwa tools are beefy and will cut just about anything, including big hooks.

CAM DIAGONAL CUT PLIERS
DCDCPL-7 SIZE 7" MSRP \$24.99

CAM NEEDLE NOSE PLIERS
DCCL-8 SIZE 8" MSRP \$24.99

DAIWA LURE CATCHER

Here's the best method we've seen for retrieving those favorite (and likely expensive) crankbaits once they've become snagged.

DAIWA LURE CATCHER
COMES COMPLETE WITH 45' CORD AND STORAGE REEL.
DLC100G MSRP \$23.99

DENDOH POWER CORDS

Hook up your Power Assist reel directly to your boats battery.
